

DIVYANSHU SHARMA

QA Engineer | Test Automation Specialist

Bengaluru, Karnataka • +91 7017785242 • divyanshusharmabtech1998@gmail.com

PROFESSIONAL SUMMARY

Results-driven Automation QA Engineer with 3+ years of experience specialising in test automation and manual testing across web, mobile, and API domains. Proficient in Playwright (JS/TS) automation frameworks and RESTful API testing using Postman. Experienced in backend validation with Kafka, AWS Lambda, and S3. Familiar with CI/CD pipeline integration and AWS DevOps workflows. Currently building expertise in mobile application testing across iOS and Android platforms. Strong communicator able to articulate risk and quality status clearly to cross-functional teams in Agile/Scrum environments. Automation using test scripts using Playwright with TypeScript, JavaScript and Python.

PROFESSIONAL EXPERIENCE

QA Engineer | DWH (Delhi Web Hosting)

July 2022 – Present

- Led manual and API testing for OMFP and Reservation Cart modules, ensuring comprehensive functional and regression coverage.
- Developed and maintained automated test scripts using Playwright (TypeScript), improving test coverage and execution efficiency.
- Integrated Playwright automation scripts into CI/CD pipelines, enabling faster and more reliable release cycles.
- Wrote clean, maintainable JavaScript/TypeScript test scripts for API validation including status codes, response body validation, and authentication flows (OAuth, JWT).
- Conducted REST API testing and sprint QA cycles; managed defect reporting and re-validation via JIRA.
- Performed exploratory mobile application testing on Android simulators and physical devices as part of expanding mobile QA responsibilities.
- Collaborated with developers and product owners in daily Scrum ceremonies; authored detailed test documentation including test cases, screenshots, and results.
- Delivered multiple client projects with zero critical production defects; introduced standardised processes for test case documentation and defect reporting.

KEY PROJECTS

OMFP – Order Management & Fulfilment Platform

DWH | 2022 – Present

Tech Stack: Manhattan Active OMS, AWS Lambda, AWS S3, AWS EventBridge, Playwright (JS, TS, Python), Postman, JIRA

- Served as the sole QA in an Agile squad responsible for end-to-end quality of the order management and fulfilment platform built on Manhattan Active OMS.
- Validated core commerce flows including product availability checks, cart management, inventory reservation, and order routing across multiple fulfilment nodes.
- Designed and executed 150+ test cases covering functional, regression, and smoke testing for each sprint release.
- Built a Playwright (TypeScript) automation suite from scratch for critical checkout and inventory flows, achieving ~60% automation coverage on regression suite.
- Identified and reported 200+ defects across functional and integration layers; tracked re-validation and closure via JIRA with zero critical escapes to production.
- Validated Manhattan Active OMS configurations including availability rules, ATP (Available-to-Promise) logic, and cart reservation timeouts.

Manhattan Active ↔ AWS Integration Testing

DWH | 2023 – Present

Tech Stack: AWS Lambda, AWS S3, AWS EventBridge, Kafka, Kong API Gateway, Postman, Playwright (JS, TS Python), JIRA

- Owned API and integration testing for event-driven pipelines connecting Manhattan Active OMS with AWS backend services (Lambda, S3, EventBridge).
- Tested asynchronous Kafka event streams for order lifecycle events — order created, allocated, dispatched, and cancelled — validating message payload schemas and sequencing.
- Validated REST APIs through Kong API Gateway including authentication (OAuth2, JWT), rate limiting, and error response handling using Postman and Playwright.
- Wrote reusable JS/TS API test scripts for payload validation, status code assertions, and authentication flows — integrated into the CI/CD pipeline for automated PR checks.
- Collaborated with backend developers to reproduce and debug integration failures between Manhattan and AWS Lambda trigger functions.
- Maintained test data sets in AWS S3 and validated Lambda-triggered processing logic for inventory sync and order status updates.

Reservation Cart Module

DWH | 2022 – 2023

Tech Stack: Manhattan Active, Playwright (JS, TS, Python), Postman, AWS, JIRA

- Performed end-to-end functional testing of the cart and reservation module — covering add-to-cart, inventory hold, session expiry, and checkout flows.
- Tested edge cases including concurrent cart reservations, inventory oversell prevention, and timeout-based reservation release.
- Automated key regression scenarios using Playwright (TypeScript), reducing manual regression effort by ~40% per sprint.
- Executed sprint QA cycles including smoke testing post-deployment and defect re-validation; maintained detailed test evidence in JIRA.
- Worked closely with product owners to clarify acceptance criteria and ensure test coverage aligned with business rules for reservation expiry and stock allocation.

KEY SKILLS

Automation	Playwright (JS/TS) – Primary Tool
API Testing	Postman, RESTful services, status code & response validation, OAuth, JWT
Languages	JavaScript, TypeScript, Python, Node.js
Mobile Testing	Android physical devices & emulators; iOS simulators (developing proficiency)
CI/CD & DevOps	AWS DevOps (Boards, Pipelines), Jenkins, Git
Cloud & Backend	AWS Lambda, AWS S3, AWS EventBridge, Kafka, Kong API Gateway
Testing Types	Functional, Regression, Smoke, API, Backend, PR & Sprint QA
Project Tools	JIRA, Git, Agile/Scrum, SQL

EDUCATION

Bachelor of Technology (B.Tech)

MIET, Meerut | AKTU, Lucknow

Graduated 2022

Intermediate (Class XII)

SNVP, Meerut | CBSE

High School (Class X)

J.P. Academy, Meerut | CBSE
